

how green are we?...

Environmental Checklist

- Our Anicolor Press will save over 1.5 million sheets of paper per year in reduced set up sheets. Our competitors will use between 250 and 400 sheets of paper settling a job down for colour, whereas the Anicolor only uses 15 sheets.
- Due to the 35% increased productivity of the machine we therefore use less electricity to print each job.
- 1.5 million sheets of paper equates to approximately 32 tonnes of paper. During the manufacture of paper, each ton will need over 1,000 litres of water to produce it, and enough electricity to power a house for a week.
- The heating in our factory utilises Inverta technology, which is the most cost effective way of heating a premises.
- Our inks are vegetable based inks as opposed to solvent based inks.
- Our CTP machines utilise chemistry-free processing.
- Our plates are made from aluminium and after they are used they are 100% recyclable.
- The minimum paper waste that we do produce is 100% recyclable.
- Our coating and waste inks are disposed of by a reputable ISO accredited company specialising in handling print waste.
- All of the paper that we use within the business is from an FSC certified supplier.
- All of the paper used in our factory is from sustainable sources.
- Our office print cartridges are refilled and recycled.
- Our office waste paper is shredded and added to our paper bins for recycling.
- Because we have this fantastic suite of machines there will be 360 less trees that need to be cut down every year.
